

Lift-Tongs

BERMER-BILT

- **ELIMINATE COSTLY MOLD DAMAGE**
- **PREVENT BODY INJURY**
- **SIMULATE MOLD OPENING**

The Bermer-Bilt Lift Tong is a sure and positive method of mold opening. The tension exerted by the lift arms are directly proportional to the weight of the mold base.

This device utilizes the clamping slots of the standard mold base for its gripping action. Therefore, elimination of unsightly and possible damaging tool marks created in opening is eliminated.

Lateral movements created by standard opening methods are also discarded. A straight vertical opening is accomplished.

Fabricated from structural steel members with heavy duty hardware and welded into place.
